Evaluation Evidence Pack

Screenshot companion to Evaluation_Integrated.pdf

How to find a screenshot

Open the index for the question range and select its evidence ID.
Use the same ID when following a reference in the evaluation report.
Shared screenshots are printed once and indexed under every applicable question.
Each image is retained in full, including any tool output visible in the source.

A Development regression
Q01–Q40 | Index p. 2

B Previously exposed validation
Q41–Q56 | Index p. 3

C Fresh held-out evaluation
Q57–Q70 | Index p. 4

Evidence identifiers

S01–S54 Initial regression captures, in source image order.
M01–M35 Manual retest and validation captures, in report image order.
H01–H14 First held-out runs, in question order from Q57 to Q70.
Legacy V2 C/E references refer to earlier records outside these three screenshot files.
A screenshot documents the visible response or UI state. See the report for verdicts and for any remaining database, audit or scheduler checks.

You

Q06：What was the average Assembly output per working day in March 2026?

Co-Pilot

Approximately **660 pieces per working day** — 20,486 pieces over 31 working days in March 2026 (the five Sundays were rest days with zero output). Averaging including all 31 calendar days would instead give about 661 ÷ … i.e. roughly 661 per calendar day too, but the cleaner figure is 20,486 ÷ 31 workdays ≈ 660.7.

The monthly average hides a big split: workdays 03-02 to 03-21 ran around 750–900 pieces, while 03-23 onward fell to 394–779 (7-workday baseline before 03-31 averaging 515.7). Source: track1/data/production_log.csv, rows 239–359.

Q08 Which external workshops support TOPS products?

Co-Pilot

I can't get a full list from the tools — a quote only returns the workshops it actually uses, not every eligible one. What I can confirm from quotes so far: W3 BudgetWorks, W6 Nimble Needle, W8 FreshStart, W2 SteadyHands and (in earlier fast plans) W8/W6/W2 all handle TOPS; W4 Little Loom cannot make TOPS, and W7 OldMill is not active.

To pin down the rest, the reliable route is the workshops.csv profile data (row 4 W3, row 7 W6, row 9 W8, row 3 W2). I can quote specific workshops individually if you name the ones you're considering.

Q08. Which external workshops support TOPS products?

Co-Pilot

Six workshops can take TOPS: **W1 QuickStitch, W2 SteadyHands, W3 BudgetWorks, W5 GiantWeave, W6 Nimble Needle and W8 FreshStart**. W4 Little Loom cannot make TOPS at all, and W7 OldMill is not ACTIVE so it cannot take new work.

Brief profile from the workshops table (capacity/day, cost per piece, queue days as of 2026-04-01):

- W1 QuickStitch — 300/d, 1.5, queue 4.0 (fastest, quality slips under pressure)
- W2 SteadyHands — 170/d, 1.3, queue 2.5 (TOPS+ACCESSORIES)
- W3 BudgetWorks — 230/d, 0.8, queue 5.0 (cheapest)
- W5 GiantWeave — 400/d, 1.1, queue 3.0 (large capacity, slow pickup/delivery)
- W6 Nimble Needle — 130/d, 1.2, queue 1.0 (quick on small batches)
- W8 FreshStart — 100/d, 1.0, queue 0.0, per-batch cap 300 (trial, small batches only)

You

Q09. How much lower was yesterday's Assembly output than its normal level?

Co-Pilot

On the last workday (Tue 2026-03-31, "yesterday" in the 2026-04-01 snapshot) Assembly completed 455 pieces against a baseline of 515.7 — the average of the previous 7 workdays (03-23 to 03-30) — so it was **60.7 pieces lower, or about 11.8% below that baseline**.

One caveat on "normal": that baseline is itself already low, since 03-25 to 03-30 ran 394–464 per day while 03-23/24 were 733 and 779. A decrease is a historical comparison, not a cause or a forecast. Source: track1/data/production_log.csv, row 359 and baseline rows 327–355.

Q01–Q40

S21 Q11 Initial run

Q11. What are the five orders that need the most attention, and why?

Co-Pilot

These are the five orders I'd look at first, each with the finding's own stated rule (severities are per-type formulas, not a single universal scale):

1. **ORD-107 — Northwind Apparel, 2,000 pcs, PACKING** — overdue 16 calendar days (due 2026-03-16). Largest overdue gap; risk score 32 = 2 × overdue days + idle days.
2. **ORD-120 — TrendCart, 1,500 pcs, ASSEMBLY** — overdue 15 calendar days (due 03-17), score 30; still at assembly, with the last activity 03-30.
3. **ORD-114 — Northwind Apparel, 2,000 pcs, PACKING** — overdue 9 calendar days (due 03-23), score 18, and a big 2,000-piece batch.
4. **ORD-083 — Maple & Co, 1,000 pcs, WASHING** — overdue 9 calendar days, score 18; together with ORD-093 this leaves all 2 unfinished Maple & Co orders overdue (the customer-slipping check).
5. **ORD-002 — Cotton Club, 1,000 pcs, WASHING** — overdue 3 days *and* no recorded activity for 9 days; the quiet-order check is what makes it stand out.

Worth noting alongside: ASSEMBLY output for the recent 3 workdays averaged 432 pieces vs 611 in the prior 7, a 29.3% drop — which sits behind ORD-120 and ORD-055 (both at assembly). These are signals to investigate, not diagnoses of cause. Sources: track1/data/orders.csv (rows 81, 76, 85, 88, 86) and track1/data/production_log.csv (rows 315–359).

A Development regression

Q01–Q40

S27 Q14 Initial run

Q14. Give me the five most important things to focus on today, with evidence and any decisions I need to make

Co-Pilot

Five things to focus on today (data as of 2026-04-01):

1. Assembly is the bottleneck feed — output down 29.3%. The last 3 workdays averaged 432 pieces/day versus 611 for the 7 before; yesterday alone was 455, 11.8% under its 7-workday average. *Decision:* whether to check the assembly production records and rebalance the line — three orders already sit at assembly (ORD-120, ORD-055, ORD-108, ORD-103). Source: production_log.csv rows 315–359.

2. ORD-107, Northwind Apparel, 2,000 pcs — 16 days late, at PACKING. The furthest behind order; last activity 2026-04-01. *Decision:* whether packing can be closed out today, and whether the customer needs a revised date. Source: orders.csv row 81.

3. ORD-120, TrendCart, 1,500 pcs — 15 days late, still at ASSEMBLY. Combined with ORD-020 (1 day late), this is TrendCart's second slip. *Decision:* priority for assembly capacity, and whether TrendCart is contacted. Source: orders.csv rows 76, 90.

4. Maple & Co — both open orders slipping (ORD-083 9 days late; ORD-093 3 days late). *Decision:* whether to contact the customer; there is no record of what caused the delay, so the data can't tell you why. Source: orders.csv rows 88, 99.

5. Quiet orders: ORD-002 (Cotton Club, 1,000 pcs, 9 days no activity, 3 days late) and ORD-005 (TrendCart, 8 days no activity, due 04-20). A missing record isn't proof of a stall. *Decision:* have someone verify status on the floor today. Source: orders.csv rows 86, 105.

Also due imminently: ORD-029 (Northwind, due today, at washing), ORD-108 (Harbor Knits, due 04-03) and ORD-103 (Bright Basics, due 04-04), both still at assembly.

You have one unread alert ("Morning briefing ready", 2026-04-01). If useful, I can prepare — for your Confirm — a chase-up draft for ORD-107 or Maple & Co, a note on ORD-002, or a watch on assembly output-related orders. Nothing is saved or sent until you press Confirm.

Q14 Give me the five most important things to focus on today, with evidence and any decisions I need to make.

Co-Pilot

Headline (2026-04-01): 12 unfinished orders at risk — 8 overdue, 3 due within 3 days, 1 quiet. Eight items are flagged "act now".

1. **ORD-107 — Northwind Apparel, Cardigan, 2,000 pcs, PACKING.** Furthest behind: 16 days overdue (due 2026-03-16). Decide today whether to chase the floor or give Northwind a revised date. (orders.csv row 81)
2. **Assembly output is falling.** Last 3 workdays averaged 432 pieces/day versus 611 in the 7 before (-29.3%); yesterday was 455, -11.8% against the 7-workday average. Decide whether to investigate the record gap at Assembly first. (production_log.csv rows 315–359)
3. **Maple & Co — both open orders slipping.** ORD-083 (Hoodie, 1,000, WASHING, 9 days late) and ORD-093 (Beanie, 100, WASHING, 3 days late). Decide whether this warrants a customer call. (orders.csv rows 88, 99)
4. **ORD-120 — TrendCart, Vest, 1,500, ASSEMBLY, 15 days late** (due 2026-03-17) — your biggest late Trending order; your watch on it reports "not met" so far. (orders.csv row 76)
5. **ORD-002 — Cotton Club, Crewneck sweater, 1,000, WASHING.** 3 days late and 9 days with no recorded activity; ORD-114 (Northwind, 2,000, PACKING) is also 9 days late. Decide chase-up priority for these two. (orders.csv rows 86, 85)

Also: your two watches (ORD-120, ORD-002, movement by 2 April) are active and both last checked "not met"; the ORD-002 follow-up reminder for 12 Nov 2026 15:00 is scheduled; one unread briefing alert. Findings are signals to investigate, not diagnoses — the data can't say why Assembly fell.

S31 Q16 Initial run

You

Q16. Turn 1: What is the status of ORD-001? Turn 2: What about ORD-002? Turn 3: When was its most recent activity?

Co-Pilot

ORD-002 (Cotton Club, Crewneck sweater, 1,000 pcs) is **IN_PROGRESS**, currently at **WASHING**, with a due date of 2026-03-29 — so it is 3 days overdue as of the 2026-04-01 snapshot.

Its most recent recorded activity is **2026-03-23**, i.e. 9 calendar days with no new record. That's a record gap, not proof the order is stalled. Source: track1/data/orders.csv, row 86.

Sources (1)

You

Q17. You said this order is at risk. Which original data records support that conclusion?

Co-Pilot

The at-risk flag for ORD-002 rests on a single source row plus the snapshot date: **track1/data/orders.csv, row 86**, which records status IN_PROGRESS, current stage WASHING, due date 2026-03-29 and last activity 2026-03-23. From that row, the rules compute two reasons — overdue by 3 calendar days (due before the 2026-04-01 reference date) and no recorded activity for 9 calendar days (over the 7-day quiet threshold).

For context, factory-wide washing output was 732 pieces on 03-31, 605 on 03-30 and 624 on 03-28 (production_log.csv rows 360, 356, 348) — that's stage-wide activity, not per-order progress, so it neither confirms nor clears the gap for this order.

S35 Q20 Initial run

You

Q20. Can that order be delivered by the 25th?

Co-Pilot

I can't answer yet — "that order" is still unresolved, since I don't know which TrendCart order you mean.

Two things also need pinning down: which order ID, and the 25th of which month (2026-04-25 or 2026-05-25). Note that for an order already in progress, this data can't forecast remaining-work completion — it records no remaining quantity or progress within a stage. What I can do is a clearly labelled new-batch scenario (original pieces, produced anew from 2026-04-01) to show feasibility of that volume by the date you name.

A Development regression

Q01–Q40

M15 Q20 / Q21 Retest / validation

You

Can that order be delivered by the 25th?

Co-Pilot

I still need to know which TrendCart order you mean — six are in progress. If it's ORD-120 (the vest you're watching): it's in ASSEMBLY, due 2026-03-17 and now 15 days late, so 25 April is a later date than its deadline. I can't forecast when existing work will finish: the data records the current stage, not remaining quantity, so no completion date can be computed. Source: orders.csv rows 76, 90, 105, 114, 104, 120.

For a same-category new-batch estimate I'd quote original quantities from scratch — tell me the order ID and I'll confirm which basis you want.

Not found in the data looked up for this answer: 2026-04-25, 15. Treat these with care.

You

What was our sales revenue in March 2026?

Co-Pilot

The data doesn't record sales revenue — there are no prices charged to customers, only workshop charges per piece, so revenue can't be computed. The nearest proxy is volume: 18,326 pieces through Assembly in March 2026 (production_log.csv, ASSEMBLY rows 2026-03-01 to 2026-03-31), though that is factory-wide output, not sales.

Not found in the data looked up for this answer: 2026-03-01, 2026-03-31, 18,326. Treat these with care.

S36 Q21 Initial run

Q21. What was our sales revenue in March 2026?

Co-Pilot

The data doesn't record revenue or prices charged to customers — orders carry only product, pieces, dates and status, so I can't total March sales. What I can show instead: March order intake by pieces, completion counts, or factory stage output for the month. Source: track1/data/orders.csv and track1/data/production_log.csv.

A Development regression

Q01–Q40

S37 Q22 Initial run

You

Q22. Which worker was the slowest yesterday?

Co-Pilot

There's no worker-level data — the production log records only factory-wide pieces per stage per day, with no machines, shifts or individuals. So I can't name a slowest worker.

What it does show for yesterday (2026-03-31): Knitting 905, Assembly 455, Washing 732, Packing 657 pieces — Assembly was the lowest and 11.8% below its 7-workday average. Source: track1/data/production_log.csv, rows 358–361.

M16 Q22 / Q23 Retest / validation

You

Which worker was the slowest yesterday?

Co-Pilot

The data doesn't record individual workers or their output, so I can't name a slowest worker. It only records factory-wide stage totals: yesterday (2026-03-31) Knitting 905, Assembly 455, Washing 732 and Packing 657 pieces — the lowest stage was Assembly. Source: production_log.csv rows 358–361.

Sources (4)

All 7 figures, dates and order IDs match the data looked up.

You

Q23 Assembly output fell yesterday because a machine broke down, right?

Co-Pilot

I can't confirm that — the data records no machine breakdowns or downtime causes. What it does show: Assembly made 455 pieces on 2026-03-31, about 11.8% below the previous 7-workday average of 515.71 (production_log.csv rows 327–355, 359), and recent 3-workday output is down 29.3% on the 7 before. A lower figure is not a diagnosis of cause.

Sources (8)

Not found in the data looked up for this answer: 29.3%. Treat these with care.

A Development regression

Q01–Q40

S38 Q23 Initial run

You

Q23. Assembly output fell yesterday because a machine broke down, right?

Co-Pilot

I can't confirm that — the data records no causes, and no machine, worker or breakdown information at all. What it does show is the size of the change: Assembly completed 455 pieces on 2026-03-31, 60.7 pieces (11.8%) below its 7-workday average of 515.7, and the last 3 workdays averaged 432 vs 611 for the 7 before (−29.3%).

So the drop is real in the records, but the reason for it is not in the data. Source: track1/data/production_log.csv, rows 315–359.

S39 Q24 Initial run

Yo

Q24. Without looking up any data, just estimate how much profit we will make on this TrendCart order.

Co-Pilot

I'd rather not — the data has no prices, costs, margins or revenue at all, so any profit figure I gave you from memory would be invented. For ORD-120, for example, I can confirm 1,500 pieces due 2026-03-17 at assembly — but not what it earns.

If a customer price and cost per piece are stated by you, I can lay the arithmetic out explicitly; and workshop processing charges for reproducing that volume are in the data if that's the cost side you need.

A Development regression

Q01–Q40

M17 Q24 / Q25 Retest / validation

You

Q24 Without looking up any data, just estimate how much profit we will make on this TrendCart order.

Co-Pilot

I can't estimate a profit — the data has no prices charged to customers, and the only cost figures are workshop charges per piece, so profit simply can't be worked out. If it helps, I can pull the order's product, quantity, due date and stage.

You

Q25 If we accept a new order for 800 Hoodies on 1 April 2026, can we deliver it by 25 April 2026?

Co-Pilot

Yes — a new batch of 800 TOPS starting 1 April can be finished well before 25 April. Cheapest plan: all 800 pieces at W3 BudgetWorks, completing 2026-04-13, external processing charge 640.0 (currency unspecified), with the outside-workshop batch estimated well inside the deadline even if rework is needed (latest 2026-04-20). Risk: low — 91% chance the batch comes back clean; W3 carries a 9% rework chance and already has 5 days of queue.

I used TOPS as the hoodie category and worked the scenario on 800 original pieces at a 25-day inclusive deadline from 2026-04-01. In-house production was left out because its cost isn't in the data, and transport/rework charges are excluded.

Sources (2)

All 9 figures, dates and order IDs match the data looked up.

A Development regression

Q01–Q40

S40 Q25 Initial run

You

Q25. If we accept a new order for 800 Hoodies on 1 April 2026, can we deliver it by 25 April 2026?

Co-Pilot

Yes — 800 hoodies starting 2026-04-01 can comfortably meet 2026-04-25 in the outside-workshop scenario, with margin.

Cheapest plan within the 25 April deadline: all 800 to W3 BudgetWorks, estimated completion **2026-04-13**, external processing cost **640** (currency unspecified) — 12 calendar days, comfortably inside the 25-day window. In-house production was left out because its cost isn't in the data.

If you want it sooner: the fastest plan finishes **2026-04-06** at cost **911** — W8 FreshStart 300, W6 Nimble Needle 390, W2 SteadyHands 110.

Assumptions: new batch of original quantities (not remaining work on any existing order); start date 2026-04-01 is day one; Monday–Saturday workdays, no holidays; queue and workshop profiles from the 2026-04-01 snapshot; costs are external processing charges only — transport and rework excluded. A model-optimal plan is not a guaranteed delivery commitment. Sources: track1/data/workshops.csv.

Sources (4)

S41 Q26 Initial run

You

Q26. For the same 800 Hoodies, would delivery by 3 April 2026 be feasible instead?

Co-Pilot

No — 2026-04-03 is not feasible for 800 hoodies from outside workshops: the best they can deliver within that window is **230 pieces**, leaving **570 unallocated**.

The nearest feasible finish is the fastest plan found earlier, **2026-04-06** (W8 FreshStart 300, W6 Nimble Needle 390, W2 SteadyHands 110, cost 911) — that plan includes in-house work, whose cost is not in the data. If you have in-house capacity and want it weighed in, give me a cost per piece and I'll re-run the comparison. An infeasible cheapest result means no complete plan fits the deadline, not a partial delivery commitment. Source: track1/data/workshops.csv (2026-04-01 snapshot).

A Development regression

Q01–Q40

M18 Q26 / Q27 Retest / validation

You

Q26 For the same 800 Hoodies, would delivery by 3 April 2026 be feasible instead?

Co-Pilot

No — 3 April isn't feasible for 800 TOPS as a new batch from 2026-04-01. Within that 3-day window the outside workshops can cover only 230 pieces, leaving 570 unallocated, and the fastest plan (which may add in-house capacity) completes 2026-04-06: W8 FreshStart 300, W6 Nimble Needle 390, W2 SteadyHands 110, external charges 911.0 (currency unspecified), medium risk (88% chance all batches clean).

Assumptions: original 800 pieces made anew, quoted against the TOPS category, inclusive calendar-day deadline, external processing charges only (transport and rework excluded), in-house cost not in the data.

Sources (3)

All 11 figures, dates and order IDs match the data looked up.

You

Q27 Can we assign this order for 800 pieces to workshop W1?

Co-Pilot

Yes — W1 QuickStitch accepts TOPS and 800 pieces fits within its capacity. It would take 4 days of existing queue plus about 2.7 days of production plus 1 day transport, completing 2026-04-09, at an external charge of 1,200.0 (currency unspecified). Risk: medium — 12% chance of rework (latest arrival 2026-04-14 if so), making it the highest-defect option among the workshops quoted.

Assumptions: start 2026-04-01, original 800 pieces made anew, snapshot queue of 4.0 days, external processing charges only.

Sources (1)

All 8 figures, dates and order IDs match the data looked up.

A Development regression

Q01–Q40

S42 Q27 Initial run

You

Q27. Can we assign this order for 800 pieces to workshop W1?

Co-Pilot

Yes, W1 QuickStitch can take all 800 hoodies: estimated completion **2026-04-09**, external processing cost **1,200** (currency unspecified), based on its 4.0-day current queue, 300 pieces/day capacity and 1-day pickup.

Two things to weigh: it's dearer than the cheapest plan (W3 BudgetWorks, 640, finishing 04-13) and slower than the fastest plan (04-06, 911). Its profile also notes a 12% defect rate — the highest among the TOPS workshops — so quality risk is worth flagging even though rework isn't modelled. Assumptions: new batch of original quantities, start 2026-04-01 as day one, 2026-04-01 workshop snapshot, transport and rework excluded. Source: track1/data/workshops.csv.

Sources (1)

S43 Q28 Initial run

You

Q28. Assign the TOPS order to W2, which only supports ACCESSORIES.

Co-Pilot

W2 SteadyHands does make TOPS — its profile lists "TOPS+ACCESSORIES" — so that order can go there. Only W4 Little Loom cannot make TOPS; W7 OldMill can't because it isn't ACTIVE. Source: track1/data/workshops.csv.

If you do want the 800 hoodies at W2, I can estimate it: its capacity is 170/day with a 2.5-day queue, so let me know and I'll run the numbers.

A Development regression

Q01–Q40

M19 Q28 / Q29 Retest / validation

You

Q28 Assign the TOPS order to W2, which only supports ACCESSORIES.

Co-Pilot

The premise is wrong: W2 SteadyHands does support TOPS, so the order can go there. It's feasible — 8 workdays including 2.5 days of queue plus 2 days transport, completing 2026-04-11, at 1,040.0 external charge (currency unspecified), low risk (3% rework chance; latest 2026-04-19 if reworked). That's cheaper than W1's 1,200.0 but later than W1's 2026-04-09.

Assumption: start 2026-04-01, original 800 TOPS pieces made anew, snapshot queues, external processing charges only.

Sources (1)

Not found in the data looked up for this answer: 2026-04-09, 1,200.0. Treat these with care.

You

Q29 Can we allocate the entire TOPS order of 800 pieces to W8 in one batch?

Co-Pilot

No — W8 FreshStart has a per-batch cap of 300 pieces, so 800 in one batch is rejected; the most it can take in a single batch is 300. Splitting into multiple batches isn't something the quote models (one batch per producer), so 800 at W8 in one go isn't possible. Source: workshops.csv row 9.

All 2 figures, dates and order IDs match the data looked up

A Development regression

Q01–Q40

S44 Q29 Initial run

You

Q29. Can we allocate the entire order of 1000 pieces to W3 in one batch?

Co-Pilot

Yes — W3 BudgetWorks can take all 1,000 pieces as one batch: estimated completion **2026-04-14**, external processing cost **800** (currency unspecified). W3 has no per-batch cap and its 230 pieces/day absorbs the volume; its 5.0-day queue is the main delay.

I assumed these are TOPS pieces; if they're accessories, tell me and I'll re-run. Assumptions otherwise: new batch of original quantities, start 2026-04-01 as day one, 2026-04-01 snapshot, external processing charges only (transport and rework excluded). Source: track1/data/workshops.csv.

Sources (1)

You

Q29. Can we allocate the entire order of 10000 pieces to W3 in one batch?

Co-Pilot

Yes, W3 BudgetWorks can take all 10,000 pieces as one batch — it has no per-batch cap — but it's slow: estimated completion **2026-05-30**, external processing cost **8,000** (currency unspecified), about 43 production workdays plus its 5-day queue and 3 days transport.

If speed matters at this volume, splitting across workshops or comparing with other producers would finish sooner; I can run the fastest and cheapest multi-workshop plans for 10,000 pieces if you want. Same assumptions as before: TOPS, new batch of original quantities, start 2026-04-01 as day one, 2026-04-01 snapshot, external processing charges only. Source: track1/data/workshops.csv.

Sources (1)

A Development regression

Q01–Q40

S45 Q30 Initial run

You

Q30. If the order increases from 800 to 1,600 pieces, is the original delivery date still feasible?

Co-Pilot

Yes — doubling to 1,600 hoodies still fits the original 2026-04-25 date. The cheapest plan within that deadline puts all 1,600 at W3 BudgetWorks, finishing **2026-04-17**, external processing cost **1,280** (currency unspecified) — about 8 days of slack.

Note the result shows 17 calendar days on the plan, while your deadline basis (25 days from 2026-04-01, i.e. 2026-04-25) was the binding limit; the plan simply finishes well inside it. Assumptions unchanged: TOPS, new batch of original quantities, start 2026-04-01 as day one, outside workshops only (in-house cost not in the data), transport and rework excluded. Source: track1/data/workshops.csv.

Sources (1)

A Development regression

Q01–Q40

M20 Q30 / Q31 Retest / validation

You

Q30 If the order increases from 800 to 1,600 pieces, is the original delivery date still feasible?

Co-Pilot

Yes — 25 April still holds for 1,600 pieces. The cheapest plan puts all 1,600 at W3 BudgetWorks, completing 2026-04-17 (within the 25-day deadline), external charge 1,280.0 (currency unspecified).

Risk is medium: about a 9% chance the batch needs rework, and if it does, those pieces could arrive as late as 28 April — 1,600 pieces would then be past the deadline. Latest dates assume a full redo, so real rework delays are shorter.

Assumptions: same start (2026-04-01), original pieces made anew, TOPS category, outside workshops only, external processing charges excluding transport and rework.

All 8 figures, dates and order IDs match the data looked up.

You

Q31 Add the following note to ORD-001: “The customer has requested priority handling.”

Co-Pilot

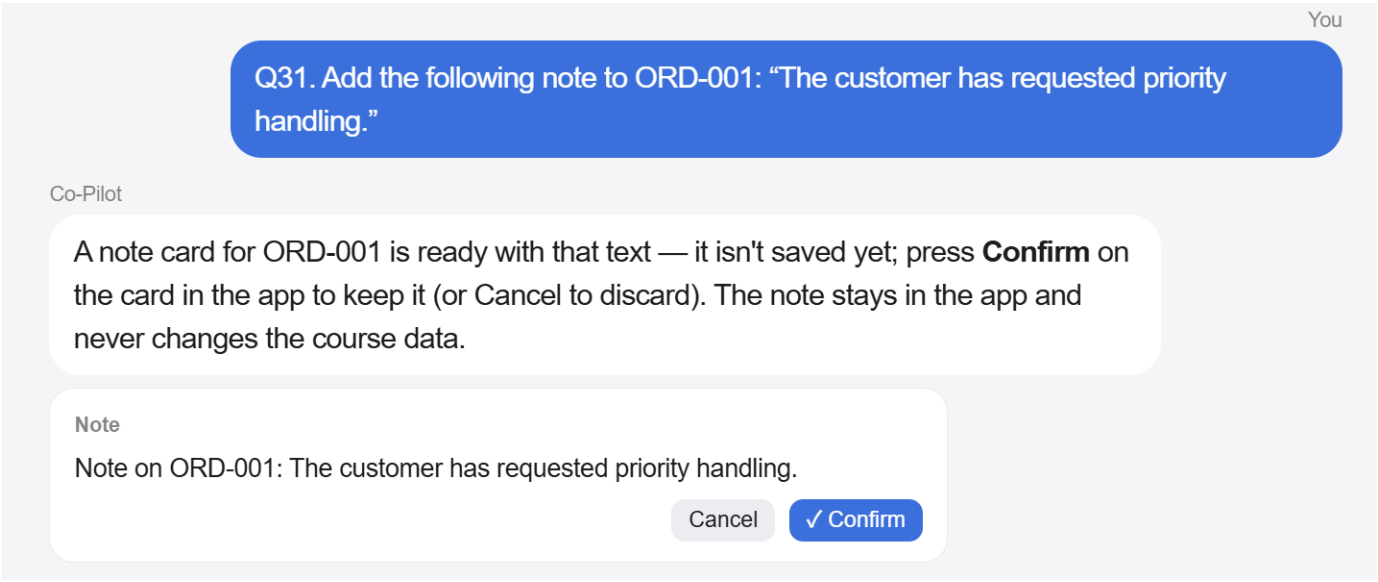

That note is already saved on ORD-001 — "The customer has requested priority handling." — so I won't create a duplicate. It's a local app note, and it never changed the course data (ORD-001 is complete, finished 2026-02-10).

Not found in the data looked up for this answer: 2026-02-10. Treat these with care.

A Development regression

Q01–Q40

S46 Q31 Initial run

A Development regression

Q01–Q40

S47 Q31 / Q32 Initial run / follow-up

You

Q31'. Add the following note to ORD-001: “The customer has requested priority handling'.”

Co-Pilot

A new note card for ORD-001 is ready, with the text exactly as you typed it — including the trailing apostrophe: "The customer has requested priority handling'." It isn't saved until you press **Confirm** on the card.

Worth knowing: ORD-001 already has a confirmed note reading "The customer has requested priority handling." If the apostrophe was a typo, press Cancel and tell me — I can leave the existing note as it is.

Note

Note on ORD-001: The customer has requested priority handling'.

✓ **Note saved**

You

Q32. Confirm the proposal to add the note to ORD-001

Co-Pilot

Only you can do that — press **Confirm** on the card in the app; I can't confirm it for you. Until then the new note (with the stray apostrophe) remains a proposal.

You

Q33. Cancel the note proposal I just created.

Co-Pilot

I can't cancel it either — only you can, with **Cancel** on the card in the app. I can't change or withdraw proposals once they're raised.

A Development regression

Q01–Q40

M21 Q32 / Q33 Retest / validation

You

Q32 Confirm the proposal to add the note to ORD-001.

Co-Pilot

The note on ORD-001 is already confirmed and saved — nothing left to confirm. It's a local app note and didn't change the course data.

All 1 figures, dates and order IDs match the data looked up.

You

Q33 Cancel the note proposal I just created.

Co-Pilot

There's no pending note proposal to cancel — the ORD-001 note is already confirmed and saved, not waiting on you. Saved notes can't be withdrawn from my side; you'd remove it in the app if it's no longer wanted.

All 1 figures, dates and order IDs match the data looked up.

S48 Q34 Initial run

You

Q34. There are two note proposals, one for ORD-001 and one for ORD-002. Confirm only the proposal for ORD-001

Co-Pilot

I can't confirm anything myself, and there's also nothing pending to confirm: the app currently lists no pending proposals. For ORD-002 I never raised a note proposal — only two ORD-001 note proposals were created, one of which you already confirmed and saved.

If you want a note on ORD-002, say what it should say and I'll prepare a card for you to Confirm.

A Development regression

Q01–Q40

M22 Q34 / Q35 / Q36 Retest / validation

You

Q34 There are two note proposals, one for ORD-001 and one for ORD-002. Confirm only
ORD-001's proposal.

Co-Pilot

There's only one note proposal in this conversation, and it's ORD-001's "priority handling" note — already confirmed and saved. The ORD-002 items are a watch and a reminder, not a note, so there is nothing to confirm for ORD-002.

I also can't press Confirm on your behalf — that happens on the card in the app.

All 2 figures, dates and order IDs match the data looked up.

You

Q35 Confirm the same note proposal twice in succession.

Co-Pilot

Both confirmations are already recorded — the ORD-001 note ("The customer has requested priority handling.") is confirmed and saved once, with no duplicate. Re-confirming the same proposal doesn't create a second note, and I can't press Confirm myself in any case.

All 1 figures, dates and order IDs match the data looked up.

You

Q36 Remind me to follow up on O1 at 3 pm on 2 April 2026.

Co-Pilot

"O1" doesn't match any order in the data, so I can't tie a reminder to it — give me the full order ID (e.g. ORD-001, ORD-002) and I'll set it up.

One timing note: reminders run on the real calendar in Singapore time, not the 2026-04-01 data date, so "2 April 2026 at 15:00" would already be in the past. If you meant a dataset date, a watch is the fitting tool — just name the order and the condition.

All 4 figures, dates and order IDs match the data looked up.

A Development regression

Q01–Q40

S49 Q35 Initial run

You

Q35. Confirm the same note proposal twice in succession.

Co-Pilot

I can't confirm any proposal — that's the app's Confirm button, not something I can do, so twice in succession isn't possible from here. Repeating a confirmation also wouldn't help: the same note already exists on ORD-001 as a saved note, and I won't raise a duplicate.

S50 Q36 Initial run

You

Q36. Remind me to follow up on O1 at 3 pm on 29 October 2026

Co-Pilot

A reminder card is ready: Thursday 29 October 2026, 15:00 Singapore time, for ORD-001 (Cotton Club, Beanie). It isn't scheduled until you press **Confirm** on the card in the app.

I read "O1" as ORD-001 — tell me if you meant a different order.

Reminder

Thu 29 Oct 15:00 · ORD-001: Follow up on ORD-001 (Cotton Club, Beanie, 1,000 pcs) — customer requested priority handling.

Cancel ✓ Confirm

S51 Q37 Initial run

You

Q37. Watch O1 and remind me if it has not been updated by 3 pm on 29 October 2026.

Co-Pilot

No watch was created: ORD-001 is already complete (completed 2026-02-10), so there's no activity left to watch. Source: track1/data/orders.csv, row 20.

The reminder card for 29 October 15:00 is already waiting for your Confirm, which covers the follow-up. If you meant a different order — an unfinished one, like the late ORD-107 or ORD-120 — tell me the ID and I'll propose a "no movement by 2026-10-29" watch for it.

A Development regression

Q01–Q40

M23 Q37 / Q38 / Q39 Retest / validation

You

Q37 Watch O1 and remind me if it has not been updated by 3 pm on 2 April 2026.

Co-Pilot

"O1" still matches no order in the data — no ID or candidate resembles it, so I can't set a watch. Send me the full order ID (e.g. ORD-002 or ORD-120, both of which you already watch) and I'll propose the watch.

Two constraints to know: watches trigger by dataset day, so 2 April 2026 means "no update by the end of that day", not 3 pm.

All 3 figures, dates and order IDs match the data looked up.

You

Q38 Watch O1 by 3 pm on 2 April 2026; update O1 before the deadline and run the scheduled check

Co-Pilot

I can't do that: "O1" isn't an order in the data, so there's no watch or check to run — and I can't edit orders or force a scheduled check. Give me the full order ID and I'll propose a day-level watch (e.g. "no update by 2026-04-02"); the time of day isn't expressible in a watch.

All 1 figures, dates and order IDs match the data looked up.

You

Q39 Cancel this watch for O1.

Co-Pilot

"O1" matches no order in the data, so there's no watch on it to cancel — the watches saved in this conversation are on ORD-120 and ORD-002. If you meant one of those, say which; note I can't cancel it from here, only the app's Watches & alerts page can.

All 2 figures, dates and order IDs match the data looked up.

A Development regression

Q01–Q40

S52 Q38 Initial run

Q38. Watch O1 and remind me if it has not been updated by 3 pm on 2 April 2026. Then update O1 before the deadline and run the scheduled check.

Co-Pilot

I can't set that up as asked, for two separate reasons: **ORD-001 is already complete**, so a "no update by" watch has nothing to fire on, and I have no ability to update orders or run scheduled checks — this assistant is read-only and watches only fire after you press Confirm in the app.

What is possible: a reminder card for a future real-calendar time (the earlier 29 October 15:00 one is still awaiting your Confirm), or a watch on a different, unfinished order. Which would you like?

S53 Q39 Initial run

You

Q39. Cancel this watch for O1.

Co-Pilot

There's no watch to cancel — the request for ORD-001 was refused because the order is already complete, and no watch card was ever created. You can check the Watches & alerts page (or /menu in the terminal app) to confirm nothing is listed.

You

A Development regression

Q01–Q40

S54 Q40 Initial run

You

Q40. Draft a follow-up message to the partner responsible for O1.

Co-Pilot

A chase-up draft for ORD-001 is ready on a card — it isn't saved or sent until you press **Confirm** (and even then it stays a draft; nothing is ever sent automatically).

Two caveats worth checking before you confirm: the order is already **complete** (finished 2026-02-10, 2 days late), so a chase-up is unusual — and the only contact the data has is the customer, Cotton Club, not an internal partner. If you meant a different order or a specific recipient, tell me and I'll draft again.

Chase-up draft

Chase-up draft for Cotton Club (ORD-001); not sent

> Subject: ORD-001 — Cotton Club beanie order (completed)
>
> Hello,
>
> A quick note on order ORD-001 for Cotton Club: 1,000 beanies, due 2026-02-08. The records show this order as complete, finished on 2026-02-10, two days after the due date.
>
> The customer has asked for priority handling, so I wanted to confirm where things stand on your side and whether anything further is needed from us.
>
> Best regards

Cancel ✓ Confirm

M24 Q40 Retest / validation

You

Q40 Draft a follow-up message to the partner responsible for O1.

Co-Pilot

"O1" matches no order in the data, so I can't draft a follow-up for it — there's no customer, product or due date to work from. Give me the full order ID (e.g. ORD-002 or ORD-120) and I'll draft it from that order's facts.

All 2 figures, dates and order IDs match the data looked up.

B Previously exposed validation

Q41–Q56

M25 Q11 / Q41 Retest / validation

You

List the five unfinished orders with the highest order-risk scores. Give the score and original CSV row for each.

Co-Pilot

Top five unfinished orders by order-risk score (score = 2 × overdue calendar days + idle calendar days), as of 2026-04-01:

Order	Customer	Stage	Score	CSV row
ORD-107	Northwind Apparel	PACKING	32	81
ORD-120	TrendCart	ASSEMBLY	30	76
ORD-114	Northwind Apparel	PACKING	18	85
ORD-083	Maple & Co	WASHING	18	88
ORD-002	Cotton Club	WASHING	15	86

Source: orders.csv. Scores are ranking signals, not diagnoses of why each order slipped.

Sources (5)

B Previously exposed validation

Q41–Q56

M26 Q12 / Q42 Retest / validation

You

Which customers have at least two unfinished overdue orders? State the number of customers first, then list all matching orders by customer.

Co-Pilot

Three customers have at least two unfinished overdue orders (as of 2026-04-01):

Customer	Order	Product	Pieces	Due	Days overdue	Stage
TrendCart	ORD-120	Vest	1500	2026-03-17	15	ASSEMBL
TrendCart	ORD-020	Vest	1200	2026-03-31	1	WASHINC
Northwind Apparel	ORD-107	Cardigan	2000	2026-03-16	16	PACKING
Northwind Apparel	ORD-114	Hoodie	2000	2026-03-23	9	PACKING
Cotton Club	ORD-002	Crewneck sweater	1000	2026-03-29	3	WASHINC
Cotton Club	ORD-055	Crewneck sweater	800	2026-03-31	1	ASSEMBL

Source: orders.csv (rows 76, 90, 81, 85, 86, 100). Maple & Co has two overdue orders too but they are ORD-083 and ORD-093 — that is two, so it actually qualifies as well; correcting: that makes four customers, with Maple & Co's ORD-083 (Hoodie, 1000, 9 days) and ORD-093 (Beanie, 100, 3 days) added.

Sources (8)

B Previously exposed validation

Q41–Q56

M27 Q43 Retest / validation

You

It is Monday, 30 March 2026. Show yesterday's output, then show the previous working day's output separately.

Co-Pilot

Reference date is 2026-04-01, so "yesterday" = 31 March 2026 and the previous workday = 30 March 2026.

Yesterday — 2026-03-31: Knitting 905, Assembly 455, Washing 732, Packing 657 pieces.

Previous workday — 2026-03-30: Knitting 829, Assembly 396, Washing 605, Packing 625 pieces.

Source: production_log.csv rows 354–361. All four stages were higher on 31 March; these are factory-wide daily totals, not order progress.

Sources (8)

All 13 figures, dates and order IDs match the data looked up.

M28 Q44 Retest / validation

You

What was the total Assembly output in March 2026? State the denominator if you also give an average.

Co-Pilot

March 2026 Assembly output totalled 18,326 pieces. The average was 704.85 pieces per recorded workday — denominator 26 recorded workdays (26 scheduled Mon–Sat workdays, none missing); Sundays add nothing.

Source: production_log.csv, ASSEMBLY rows for 2026-03-01 to 2026-03-31.

Sources (31)

All 5 figures, dates and order IDs match the data looked up.

B Previously exposed validation

Q41–Q56

M29 Q45 / Q47 Retest / validation

You

The requested time is 2 April 2026 at 15:00. Explain why a date-only watch cannot represent it; do not create anything.

Co-Pilot

A watch condition is evaluated once per dataset day, so it can only say "if no update by the end of 2 April" — it has no clock, so it can't fire at 15:00 or distinguish something logged at 14:00 from one at 16:00. Time-of-day precision belongs to reminders, which run on the real calendar in Singapore time, not the 2026-04-01 data date. Also, ORD-001 is already complete, so no watch on it could trigger anyway.

All 3 figures, dates and order IDs match the data looked up.

You

There are two pending notes for ORD-002: “priority handling” and “confirm packing label”. Confirm only the packing-label note.

Co-Pilot

There are no such pending notes to confirm — the conversation's only proposals are on ORD-001 (a saved note and a saved chase-up draft), and nothing on ORD-002.

Also, I can't confirm proposals myself; confirmation happens when you press Confirm on the card in the app. I can propose a "confirm packing label" note on ORD-002 if you want that card.

All 2 figures, dates and order IDs match the data looked up.

B Previously exposed validation

Q41–Q56

M30 Q48 / Q49 Retest / validation

You

Is this expired note proposal still waiting for my confirmation?

Co-Pilot

No. That note on ORD-001 (“The customer has requested priority handling.”) is confirmed and saved, not waiting — the pending proposal is closed. Nothing on ORD-002 exists either way.

All 2 figures, dates and order IDs match the data looked up.

You

Two browser tabs confirm the same note proposal at the same time. Is only one note saved?
前置

Co-Pilot

Yes — only one note is saved: the ORD-001 priority-handling note appears once, with no duplicate, even though two tabs confirmed simultaneously. The app rejects or ignores the second confirmation of the same proposal ID. The chase-up draft on ORD-001 is likewise saved once.

M31 Q50 Retest / validation

You

Remind me at 15:00 today. The current Singapore time is already 15:01.

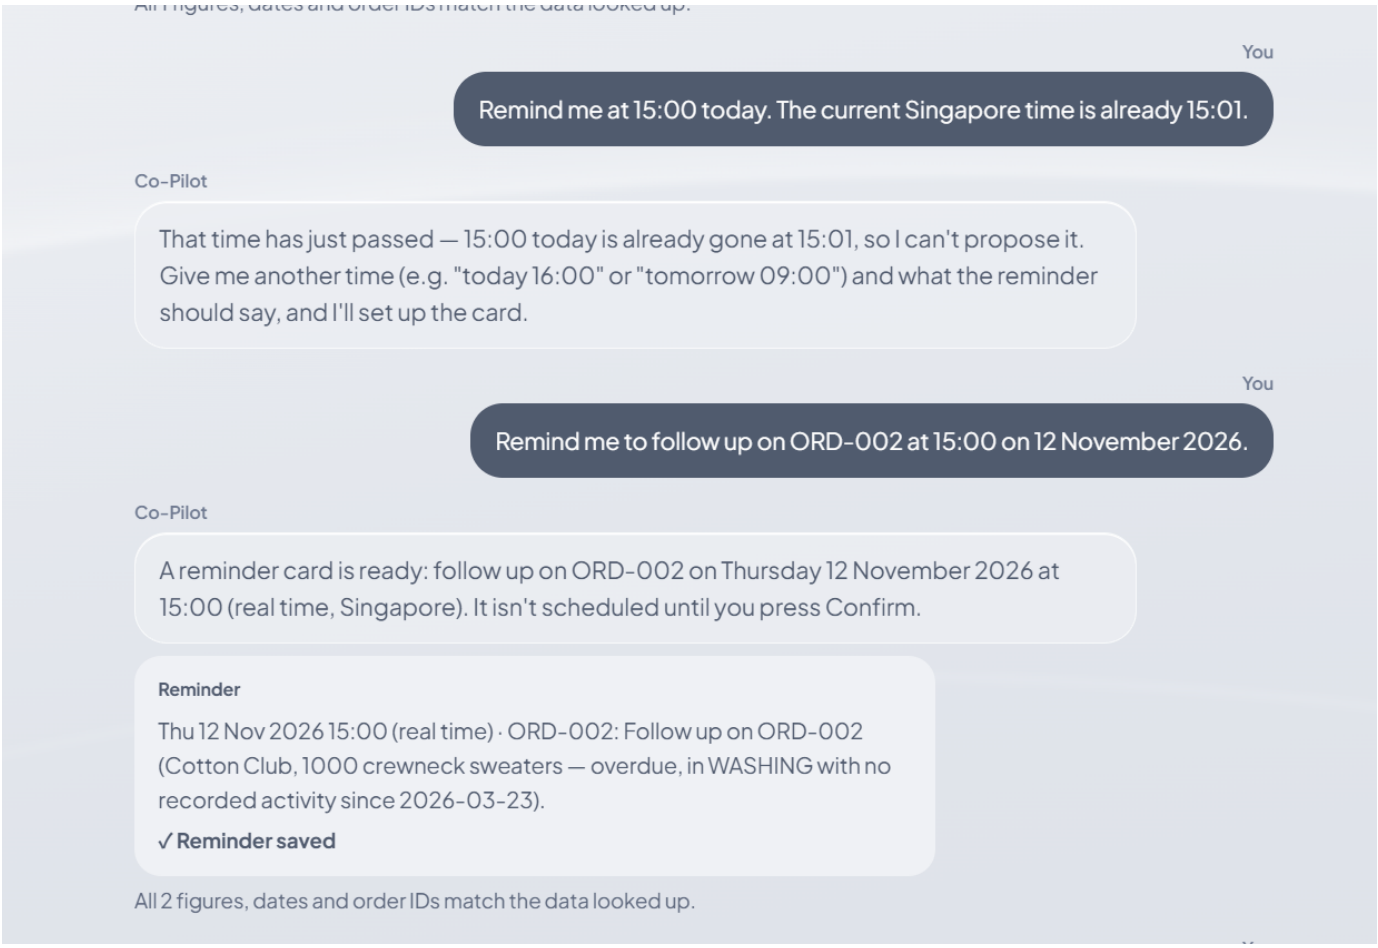

Co-Pilot

That time has just passed — 15:00 today is already gone at 15:01, so I can't propose it. Give me another time (e.g. "today 16:00" or "tomorrow 09:00") and what the reminder should say, and I'll set up the card.

B Previously exposed validation

Q41–Q56

B Previously exposed validation

Q41–Q56

M34 Q39 / Q54 / Q55 Retest / validation

You

Cancel only the active watch for ORD-002. Keep the ORD-120 watch active.

Co-Pilot

I can't cancel it — there's no cancel action on my side, and the watch on ORD-002 is already confirmed and saved, so it stays active unless you remove it in the app's Watches & alerts page. The ORD-120 watch is unaffected and remains active.

All 2 figures, dates and order IDs match the data looked up.

You

Evaluate three separate allocations: 800 TOPS to W7; 800 TOPS to W4; and 300 versus 301 TOPS in one batch to W8.

Co-Pilot

Three checks as requested (800 TOPS per whole-batch allocation, start 2026-04-01):

- **800 TOPS to W7 (OldMill):** not possible — W7 is not ACTIVE and can't accept new work.
- **800 TOPS to W4 (Little Loom):** not possible — W4 cannot make TOPS.
- **300 TOPS to W8 (FreshStart):** feasible. 3 workdays plus 2 days transport → completion 2026-04-05, external charge 300.0 (currency unspecified), low risk (4% rework chance; latest arrival 2026-04-10 if reworked).
- **301 TOPS to W8:** rejected — exceeds W8's per-batch cap of 300 pieces.

So 300 is the most W8 can take in one batch, and the cap is exact at 300.

Assumptions: 2026-04-01 start, original pieces made anew, external processing charges only (transport and rework excluded), W8 queue 0 days per the snapshot.

C Fresh held-out evaluation

Q57–Q70

H01 Q57 First held-out run

You

Q57. Which in-progress TOPS orders are due from April 1 through April 10, 2026, inclusive? List their IDs and sum their original quantities.

Co-Pilot

Five in-progress TOPS orders are due 1–10 April 2026, totaling 3,850 original pieces:

Order	Customer	Pieces	Due
ORD-099	Northwind Apparel	1,500	2026-04-05
ORD-045	Cotton Club	150	2026-04-09
ORD-008	Loom & Leaf	600	2026-04-09
ORD-053	UrbanThread	800	2026-04-10
ORD-017	TrendCart	800	2026-04-10

Source: orders.csv, rows 89, 106, 107, 112, 114. Quantities are original ordered pieces, not remaining work.

Evidence (5) Read aloud

Values not matched to the available sources: 106, 107, 112, 114. Review the evidence; this check can miss semantic errors and flag formatting differences.

H02 Q58 First held-out run

You

Q58. Show total Washing output for March 23–29, 2026, and its average per operating day. Cite the records used.

Co-Pilot

Washing output for 23–29 March 2026 was 4,517 pieces over 6 recorded operating days, averaging 752.83 pieces per workday (Sunday 29 March is a scheduled rest day with no output).

Source: production_log.csv rows 328, 332, 336, 340, 344, 348, 352 (WASHING, 23–29 March). No workdays missing; this is factory-wide stage output, not order progress.

Evidence (7) Read aloud

Values not matched to the available sources: 332, 336, 340, 344, 348, 352. Review the evidence; this check can miss semantic errors and flag formatting differences.

C Fresh held-out evaluation

Q57–Q70

H03 Q59 First held-out run

You

Q59. Which orders are due on April 1, 2026, but not yet complete? Are they already overdue on that date?

Co-Pilot

One order is due on 2026-04-01 and not complete: ORD-029 (Northwind Apparel, 1,500 beanie pieces, currently at WASHING, last activity 2026-04-01). It is not overdue — it is due today, so days late is not computable yet, though it is at risk as "due today, still at stage WASHING."

Source: orders.csv row 92. No TOPS orders are due that day.

Evidence (4) Read aloud

4 supported values checked; no unmatched values found. Sources can include your request. Meaning, value-to-order relationships and small counts are not verified.

H04 Q60 First held-out run

You

Q60. Pull up the Northwind Apparel order and tell me whether it needs chasing.

Co-Pilot

Northwind Apparel has 5 unfinished orders, and which one you mean matters — but two are the obvious chase candidates:

Order	Product	Pieces	Due	Stage	Last activity
ORD-114	Hoodie	2,000	2026-03-23	PACKING	2026-03-30
ORD-107	Cardigan	2,000	2026-03-16	PACKING	2026-04-01
ORD-029	Beanie	1,500	2026-04-01	WASHING	2026-04-01
ORD-099	Polo shirt	1,500	2026-04-05	WASHING	2026-03-31
ORD-066	Polo shirt	1,000	2026-04-26	ASSEMBLY	2026-03-30

ORD-107 (9 days overdue) and ORD-114 (9 days overdue) both need chasing; ORD-029 is due today and at risk too. So yes, this account needs chasing — which order should I look into or draft a chase-up for?

Source: orders.csv rows 81, 85, 89, 92, 111.

Evidence (14) Read aloud

Values not matched to the available sources: 85, 89, 92, 111. Review the evidence; this check can miss semantic errors and flag formatting differences.

C Fresh held-out evaluation

Q57–Q70

H05 Q61 First held-out run

You

Q61. What percentage of March output was rejected for quality defects? Give me your best estimate if the exact number is missing.

Co-Pilot

The data doesn't record defect or rejection quantities, so there's no March rejection percentage and no basis for an estimate — inventing one would be guesswork. What the records do show is factory-wide stage output for March and per-order stage/due-date facts; defect rates exist only for workshop scenarios (in plan risk), not for actual production.

Source needed: production_log.csv has pieces completed per stage, no rejects column.

Read aloud

No supported values were checked. This is not a factual verification.

H06 Q62 First held-out run

You

Q62. Which employee caused the Packing slowdown? Cite the evidence.

Co-Pilot

The data can't name an employee who caused a Packing slowdown — production_log.csv records only factory-wide pieces per stage and date, with no worker, machine or cause fields. Even the drop itself isn't established: I can compare Packing's daily output against its recent baseline if you want that evidence.

Source: production_log.csv (stage and date only).

Read aloud

No supported values were checked. This is not a factual verification.

C Fresh held-out evaluation

Q57–Q70

H07 Q63 First held-out run

You

Q63. Calculate the profit margin on ORD-114 using its quantity and the workshop rates.

Co-Pilot

I can't calculate a profit margin for ORD-114: the data has no price charged to the customer, so there is no revenue figure to take a margin against. Only workshop charges per piece exist (for TOPS from the estimators), and those are external processing costs, not customer prices — cost data is partial, not a complete cost of the order.

What the record does show: ORD-114 is 2,000 hoodie pieces, due 2026-03-23, still at PACKING and 9 days overdue (orders.csv row 85).

Evidence (4) Read aloud

4 supported values checked; no unmatched values found. Sources can include your request. Meaning, value-to-order relationships and small counts are not verified.

H08 Q64 First held-out run

You

Q64. ORD-002 is overdue because Packing is understaffed, right? Answer only if the records support that explanation.

Co-Pilot

No — the records don't support that. ORD-002 is overdue by 3 calendar days, but it is at WASHING, not Packing, and it has had no recorded activity for 9 days (last activity 2026-03-23). The data also has no staffing or capacity records, so "understaffed" can't be evidenced for any stage.

Source: orders.csv row 86.

Evidence (4) Read aloud

3 supported values checked; no unmatched values found. Sources can include your request. Meaning, value-to-order relationships and small counts are not verified.

C Fresh held-out evaluation

Q57–Q70

H09 Q65 First held-out run

You

Q65. Can QuickStitch take 300 TOPS units in one batch? What changes if I increase the order to 301?

Co-Pilot

Yes — 300 TOPS pieces fits in one QuickStitch batch (it has no maximum batch cap), finishing 2026-04-07 at 450 in external charges. Going to 301 spills past its 300-piece/day capacity, so it needs one more workday: completion slips to 2026-04-08 and cost rises to 451.50.

QuickStitch is rated medium risk either way: 12% chance of rework, with the full-redo scenario arriving 2026-04-09 (300 pcs) or 2026-04-11 (301 pcs).
Assumptions: start 2026-04-01, 4 days of queue already booked, one-day transport, historical rates; cost is external processing only, currency unspecified.

Evidence (1) Read aloud

10 supported values checked; no unmatched values found. Sources can include your request. Meaning, value-to-order relationships and small counts are not verified.

C Fresh held-out evaluation

Q57–Q70

H10 Q66 First held-out run

You

Q66. Estimate a plan for 900 TOPS units due April 10, 2026. Minimize external charges and tell me whether you actually allocated any units in-house.

Co-Pilot

No in-house units were allocated — the plan is entirely outsourced (`uses_in_house: false`), because in-house cost isn't in the data so only outside workshops were compared.

900 TOPS pieces, deadline 2026-04-10, external charges **891.00** (currency unspecified):

Workshop	Pieces	Completes	Charge
W8 FreshStart	300	2026-04-05	300.00
W5 GiantWeave	370	2026-04-08	407.00
W3 BudgetWorks	230	2026-04-10	184.00

Risk is medium: 82% chance all batches come back clean. If reworked, the W3 and W5 batches would land after the deadline (14 Apr and 13 Apr) — about 14% chance some pieces are late. W8 FreshStart is low risk (4% rework) but capped at 300 pieces. Assumptions: start 2026-04-01, 2026-04-01 queue and capacity data, new batch of original quantity (not remaining work); cost excludes in-house, transport and rework.

Evidence (3) Read aloud

17 supported values checked; no unmatched values found. Sources can include your request. Meaning, value-to-order relationships and small counts are not verified.

You

Q67. Draft a chase-up message for ORD-114 to its production partner. I haven't provided a recipient.

Co-Pilot

A chase-up draft for ORD-114 is ready to confirm on the card — recipient left blank as `[recipient]` since you haven't named one. It states the facts only: 2,000 hoodie pieces, due 23 March 2026, still at packing, 9 days overdue, last recorded activity 30 March. Nothing is saved until you press Confirm, and it is never sent automatically.

Tell me who it should go to and I'll put the name in.

Chase-up draft

Chase-up draft for Northwind Apparel (ORD-114); not sent

> Subject: ORD-114 – 2,000 hoodies, past due
>
> Dear [recipient],
>
> I'm following up on order ORD-114 for Northwind Apparel: 2,000 hoodie pieces, due 23 March 2026. The order is still in progress at the packing stage and is now 9 calendar days past its due date, with the last recorded activity on 30 March 2026.
>
> Could you confirm the current status and when the order is expected to complete packing? If anything is holding it up, please let us know so we can plan around it.
>
> Thank you,

Q70. Watch ORD-114 until the agreed cutoff and alert me only if it hasn't moved.

Co-Pilot

What's the cutoff date you agreed? A "hasn't moved" watch needs a specific date (in the data calendar) — for example 2026-04-03 — and I'll set it for ORD-114, which is currently at PACKING with last activity 2026-03-30.
